

KAHANIYAN

Product Requirements Document

AI-Powered Indian Storytelling Web App for Kids

Version **1.0**
Date **June 2026**
Status **Draft — V1**

1. Product Overview

1.1 Product Summary

Kahaniyan is a web application that serves pre-written, culturally rooted Indian bedtime stories to children aged 3–10 years. Parents select their child's name, age, preferred Indian language, and story theme — the app fetches and personalizes a matching story from its database, displaying it beautifully for the parent to read aloud.

Product Name	Kahaniyan
Type	Web Application (no mobile app in V1)
Target Audience	Indian parents with children aged 3–10
Core Value	Personalized Indian bedtime stories in 10+ native languages
Stage	V1 — Build, validate, and get first 10 paying users
Timeline	4 weeks to launch
Infrastructure Cost	₹0 (all free tiers)

1.2 Problem Statement

Indian parents currently have no good digital storytelling product in their native language. Existing apps are English-only or feature Western characters and have zero Indian cultural

context — no Panchatantra, no Birbal, no Tenali Raman, no festival-based themes. Stories are generic; the child is never the hero. This creates a gap for a culturally rooted, language-first Indian storytelling product.

1.3 Solution

Kahaniyan solves this by providing a curated library of pre-written Indian stories with name personalization. The child's name is dynamically inserted into the story, making them the hero. Stories are written in 10+ Indian languages and rooted in traditional Indian themes.

1.4 Unique Differentiators

- 10+ Indian regional languages — not just Hindi or English
- Rooted in authentic Indian cultural themes — Panchatantra, Birbal, Tenali Raman, festivals
- Child is always the hero — name personalization built into every story
- No AI at runtime — stories are pre-written, reliable, and fast
- First mover in Indian-language digital bedtime stories for kids

2. Users & Personas

2.1 Primary User — The Indian Parent

Who	Indian parents, 25–40 years old, Tier 1/2/3 cities
Device	Mobile browser (primary), desktop browser (secondary)
Language	Prefers mother tongue for children's content
Pain Point	No good Indian story content in their language for bedtime
Goal	Keep child engaged, teach Indian values, create a bedtime routine
Willingness to Pay	₹99/month if the product is good and saves time

2.2 Secondary User — The Child (Indirect)

Who	Children aged 3–10 years
Interaction	Passive — parent reads to them
Engagement Driver	Their own name appearing in the story
Attention Span	3–5 minute stories maximum

3. Features & Requirements

3.1 V1 Feature Scope

Features included in V1 launch:

Feature	Description	Priority
Story Generator	Core — input form with name, age, language, theme	Must have
Story Display	Clean, readable story screen with warm typography	Must have
Name Personalization	{childname} replaced with actual name in story text	Must have
Language Selection	10+ Indian languages supported	Must have
Theme Selection	Panchatantra, Birbal, Tenali Raman, Festival, Custom	Must have
User Auth	Sign up / log in via Clerk	Must have
Story Library	Save stories — paid feature only	Must have
PDF Download	Download story as PDF — paid feature only	Must have
Free Tier Limit	3 stories per month for free users	Must have
Paid Plan	Unlimited stories at ₹99/month	Must have

3.2 Explicitly Out of Scope — V1

- Text-to-speech or audio narration
- AI-generated stories at runtime
- AI-generated illustrations or images
- Interactive choose-your-adventure mode
- Android or iOS native app
- Social sharing or story community features
- Multi-child profile management
- Offline mode

3.3 Story Input Fields

Child's Name	Free text input — max 20 characters
Age Group	Chip selection: 3–4 yrs / 5–6 yrs / 7–8 yrs / 9–10 yrs
Language	Chip selection: Hindi, Telugu, Tamil, Kannada, Malayalam, Marathi, Bengali, Gujarati, Punjabi, English
Theme	Chip selection: Panchatantra / Birbal / Tenali Raman / Festival / Moral Story

4. Story Database

4.1 Approach — Pre-Written Templates

Stories are pre-written and stored in Supabase. They are NOT generated by AI at runtime. This ensures zero API failures, fast load times, and consistent quality. Each story uses {childname} as a placeholder which is replaced with the actual child's name at display time.

4.2 Story Structure

id	Unique story identifier (UUID)
title	Story title with {childname} placeholder
language	ISO language code (hi, te, ta, kn, ml, mr, bn, gu, pa, en)
age_group	3-4, 5-6, 7-8, 9-10
theme	panchatantra / birbal / tenali / festival / moral
body	Full story text with {childname} placeholder
moral	One-line moral of the story
reading_time_mins	Estimated reading time in minutes
created_at	Timestamp

4.3 Minimum Story Count for Launch

Language	Target Count
Hindi	10 stories (2 per theme)
Telugu	6 stories (2 per theme)
Tamil	6 stories (2 per theme)
Kannada	4 stories
English	6 stories (2 per theme)
Other languages	2 stories each (10 stories total)

Total minimum: 40 stories before launch.

5. User Flow

5.1 New User Flow

- User lands on Kahaniyan homepage
- Sees headline, demo story preview, and pricing
- Clicks 'Create a story free'
- Clerk sign-up modal appears — email or Google
- After sign-up, redirected to story generator page
- Fills in name, age, language, theme
- Clicks 'Get Story'
- Story is fetched from Supabase and displayed with name replaced
- User can read on screen
- Story count decremented (3 free stories/month limit)

5.2 Returning Paid User Flow

- User logs in via Clerk
- Redirected to generator — no story count limit
- Generates story → reads on screen
- Optionally saves to library or downloads as PDF

5.3 Upgrade Flow

- Free user hits 3 story limit
- 'Upgrade to ₹99/month' prompt shown
- Razorpay payment page opens
- After payment, Supabase user record updated to 'paid'
- User can now generate unlimited stories

6. Technology Stack

Layer	Tool
Framework	Next.js 14 (App Router)
Styling	Tailwind CSS + DaisyUI
Authentication	Clerk
Database	Supabase (PostgreSQL)
Package Manager	npm
Deployment	Vercel
Payments	Razorpay (added post-launch)
PDF Generation	react-pdf or jsPDF (V2)
Version Control	GitHub

6.1 Key Technical Decisions

- No AI API calls at runtime — stories fetched from database only. Eliminates API failures, cost per request, and latency.
- Next.js API routes used for all backend logic — no separate server needed.
- Clerk handles all auth complexity — social login, session management, JWT tokens.
- Supabase Row Level Security ensures users can only access their own saved stories.

7. Pricing Model

Plan	Price	Features
Free	₹0 / forever	3 stories/month, read on screen only, all languages and themes
Monthly	₹99 / month	Unlimited stories, save to library, PDF download, cancel anytime
Storybook	₹499 / one-time	Download any story as a print-ready illustrated PDF book

7.1 Unit Economics

Cost per story generated	₹0 (pre-written, no API cost)
Infrastructure cost	₹0/month (all free tiers until scale)
Razorpay fee	2% per transaction
Revenue per paid user	₹97/month net after fees
Break-even users	0 — no fixed costs to break even
Target: Month 1	10 paid users = ₹970/month
Target: Month 3	100 paid users = ₹9,700/month

8. Build Plan — 4 Weeks

Week	Focus	Deliverables
Week 1	Foundation	Next.js setup, Vercel deploy, Clerk auth, Supabase connection, basic routing

Week 2	Core Feature	Story generator form, Supabase story fetch, name replacement logic, story display screen
Week 3	Polish & Paywall	Free tier counter (3 stories limit), upgrade prompt, story library for paid users, responsive design
Week 4	Launch	Write 40 stories in database, landing page live, Razorpay integration, share on Twitter/Reddit/Product Hunt

9. Success Metrics

9.1 Launch Metrics (Month 1)

Metric	Target
Signups	50 users
Stories generated	200 total
Free-to-paid conversion	10 paid users (20% conversion)
Revenue	₹990/month
Story completion rate	>70% of started stories read fully

9.2 Growth Metrics (Month 3)

Metric	Target
Total signups	500 users
Paid users	100
Monthly revenue	₹9,700
Languages with >10 stories	5 languages
Repeat usage	>40% users return within 7 days

10. Risks & Mitigations

Risk	Problem	Mitigation
Low story variety	Users get repeated stories after	Write 40+ stories before launch;

	a few uses	add 10 new stories monthly
Low conversion rate	Free users don't upgrade to ₹99	Keep free limit at 3 — just enough to feel value, not enough to stay free
Language quality	Non-Hindi story quality is poor	Get native speakers to review Tamil, Telugu, Kannada stories before launch
No traffic	Nobody finds the app after launch	Post on Twitter, Reddit (r/India, r/indianparenting), Sharechat, WhatsApp groups
Competitor launches	Funded competitor enters the space	Move fast, own the Indian-language niche before anyone else does

Appendix — Glossary

PRD	Product Requirements Document — this document
V1	Version 1 — the first publicly launched version of Kahaniyan
MRU	Monthly Regular Users — Clerk's free tier metric
DaisyUI	A Tailwind CSS component library used for UI styling
Supabase	Open-source Firebase alternative — used as Kahaniyan's database
Clerk	Third-party authentication provider — handles user login/signup
RLS	Row Level Security — Supabase feature to restrict data access per user
{childname}	Placeholder text in story templates, replaced with child's actual name at display time
